Introduction

Solutions developed by Parker Olaer are used in a large number of industrial sectors: aeronautics, chemistry, defence, mining, railway construction, Formula 1, machine tools, agriculture, oil and gas, metallurgy, renewable energies, etc.

This variety of applications requires extensive knowledge of the products and their major components, particularly the bladder. For either a standard application or design solutions for a specific requirement, Parker ACDE engineers have the experience in sizing and design.

We provide cost effective solutions based upon our customer's needs. Parker ACDE utilizes comprehensive tools and resources including an applications database, CAD/CAM, finite element analysis, reliability studies and sizing simulation software which enable us to optimize design and performance.

Parker ACDE Paris (Colombes, France)

Manufacture:

- Bladder Accumulators
 - EBV Series (Low pressure) up to 80 bar
 - EHV Series (High Pressure) up to 690 bar
- Diaphragm accumulators (ELM Series)
- Attenuators
- Accumulators for Aerospace and Motor Sport
- Accessories
- Accumulator Systems

Focus on: Industrial, Wind Power, Aerospace, Motor Sport
Approvals: CE Approval (Europe), SELO approval (China) others under development.

Parker ACDE Hellaby (Rotherham, UK)

Manufacture:

- Crimped Piston Accumulators - ACP Series (275 bar < 20 Litres)
- Piston Accumulators
 - A Series (up to 350 bar)
 - AP Series (up to 350 bar)
 - EHP Series (up to 250 bar)
- Safety blocks
- Accessories

Focus on: Industrial & Mobile
Approvals: CE Approval – others under development.

Parker ACDE Sandycroft (Chester, UK)

Manufacture:

- Bladder Accumulators
 - UK Series (up to 420 bar)
 - Oil & Gas Series (up to 760 bar)
- Piston Accumulators (up to 3000 bar)
- Pulsation Dampers
- Pressure Compensators
- Safety Blocks – Carbon Steel and Stainless Steel
- Accumulator Accessories & Systems

Focus on: Oil & Gas and bespoke Bladder & Piston Accumulators

Approvals: Large variety of approvals. Special pressure vessel approvals available.

Parker ACDE Leini (Turin, Italy)

Manufacture:

- Bladder Accumulators
 - EBV Series (Low pressure) up to 35 bar
 - EHV Series (High Pressure) up to 110 bar
- Piston Accumulators
- Piston / Bladder accumulator systems.
- Gas bottles

Focus on: Oil & Gas, Industrial, Special welded pressure vessels/tanks

Approvals: Large variety of approvals (PED & ASME most requested)

General Information Accumulators

Olaer, pioneer of high pressure equipment, was founded in 1938 by Jean Mercier. Using his experience, passion for research and extensive knowledge of hydraulics in the demanding field of aeronautics, Mr. Mercier engineered the first gas loaded bladder accumulator. This has led to Olaer becoming the indisputable international leader in this field.

This variety of applications requires extensive knowledge of the products and their major components, particularly the bladder. In order to reinforce its position, Olaer is the co-owner of its main bladder supplier. For either a standard application or designing solutions for a specific requirement, Parker ACDE engineers have the experience in elastomers and knowledge of the latest technological developments in metal and composite shells. This allows Parker ACDE to propose reduced weight accumulators and other design innovations.

We provide cost effective solutions based upon our customer's needs. Parker ACDE utilizes comprehensive tools and resources including an applications database, CAD/CAM, finite element analysis, reliability studies and simulation software which enable us to optimize design and performance.

Applications

The Parker ACDE gas loaded accumulator is an essential component for the optimum operation of a hydraulic circuit. In hydraulic circuits, the accumulator enables:

- **Energy Storage:** saves energy without loss and redistributes when required therefore reducing installed power.
- **Pressure compensation:** absorbs pressure spikes from pumps or other components to control pressure and flow-rates in a hydraulic circuit.
- **Volume Control:** absorbs fluid volume variations induced by temperature changes in a closed hydraulic circuit and maintains a rated pressure.
- **Maintains Fluid Flow Rate:** an accumulator can maintain the fluid flow rate in case of pump failure and can also be used as a mobile fluid reserve under pressure.
- **Emergency Energy Storage:** in case of failure of the main energy source, an accumulator can provide sufficient energy to complete an operation or to realize a full hydraulic cycle.
- **Prevents mixing of fluids:** Transfer of energy from a fluid to another fluid without any risk of mixing
- **Shock absorber:** suppresses shocks and vibrations in hydraulic systems of lifting vehicles (e.g. Forklift trucks) and maintains real suspension of the load on a gas spring.

Advantages/Your benefits

- **Reduction in working costs**
 - Energy reserve
 - Reduces installed electrical power
- **Increase lifetime of equipment**
 - Reduces pulsations
 - Protects against pressure peaks
- **Reduction in maintenance cost**
 - Reduces wear of hydraulic components
 - Requires minimum maintenance of the installation
- **Emergency Energy Back-up**
 - Energy reserve

Operating Principle

Operation of the gas loaded bladder accumulator is based on the considerable difference in compressibility between a gas and a liquid, enabling a large quantity of energy to be stored in an extremely compact form. This enables a liquid under pressure to be accumulated, stored and recovered at any time.

Bladder Accumulator

A - Bladder in the Pre-charge position, which means that the accumulator only contains nitrogen. The anti-extrusion system closes the hydraulic orifice which prevents the destruction of the bladder. In low pressure accumulators the bladder rests against the grid.

Maximum pressure differential (P_2/P_0): 4:1

B - Position at the minimum operating pressure. There must be a certain amount of fluid between the bladder and the hydraulic orifice, such that the anti-extrusion system does not close the hydraulic orifice.

C - Position at the maximum operating pressure. The volume difference between the minimum and maximum positions of the operating pressures represents the working fluid quantity.

Diaphragm Accumulator

A - The diaphragm is in the Pre-charge position, which means that it is only filled with nitrogen. The knob closes the hydraulic orifice and prevents the destruction of the diaphragm.

B - Position at the minimum operating pressure : there must be a certain amount of fluid between the diaphragm and the hydraulic orifice, such that the knob does not close the hydraulic orifice. Thus, P_0 must always be $< P_1$.

C - Position at the maximum operating pressure: the volume change ΔV between the minimum and maximum positions of the operating pressures represents the fluid quantity stored.

Piston Accumulator

When fluid under pressure enters the fluid side of the accumulator, the piston is pushed towards the gas side and the Nitrogen gas is compressed.

- V₀** = Capacity in nitrogen of the accumulator
- V₁** = Gas volume at the minimum hydraulic pressure
- V₂** = Gas volume at the maximum hydraulic pressure
- ΔV** = Returned and/or stored volume of working fluid between P₁ and P₂
- P₀** = Initial preload of the accumulator
- P₁** = Gas pressure at the minimum hydraulic pressure
- P₂** = Gas pressure at the maximum hydraulic pressure

Technical Characteristics

Parker can offer a wide range of options for the 3 key accumulator technologies (bladder, piston and diaphragm) depending on the application where the product is used. Two of the most important parameters for selecting an accumulator are:

- The application
- The minimum and maximum operating temperature of the system.
- The fluid type in the system.

Shell material options include standard carbon steel, alloyed steel, stainless steel, aluminium, titanium and composites. The main requirement is that the material is suitable and approved for use in pressure vessels.

The elastomers used are the key working components, and also where we have focused resources selecting the correct type and material.

Depending on the customer application, our engineers will choose the most optimum solution.

Taking into account the different needs of various applications Parker proposes different corrosion protections external or internal: bare metal, electroless nickel plating, standard primer, epoxy, paint, Rilsan.

Regulations & Approvals

Parker designs and manufactures gas loaded accumulators for use in all countries, as well as other industry specific approvals including Oil & Gas, Naval and Nuclear. The main regulations in force are PED for European market, ASME for US market and SELO for Chinese market.

As a service, Parker Olaer can recommend the appropriate regulations applicable if customers know the country where the accumulator will be installed. When operating in dangerous and explosive environments, Parker has developed high-tech solutions. Some of these regulations call for the use of safety devices to protect the accumulator against over pressure. Solutions may include hydraulic safety blocks, relief valves or gas side safety devices such as burst discs and fuse plugs. Parker has designed and proposed a complete range of safety devices suitable for the applicable regulations.

To meet the needs of our customers, Parker can supply accumulators with multiple approvals. With regard to environmental concerns Parker's product range complies with REACH regulations. Each accumulator is delivered with the certificate of conformity. The website portal has been created and permits to find in any time these documents <http://www.parkeracde-certificatesportal.com>.

How to size?

Accumulator Sizing Software

Parker Olaer has developed very sophisticated simulation software to optimise accumulator sizing recommendations. The behaviour of accumulators used in applications such as pulsation dampening, surge arrestor, thermal expansion and energy storage can be simulated. Our software can be downloaded from our website www.parker.com/ACDE.

You may also contact your local Parker Sales Company for sizing assistance.

The graph below is useful to estimate the size of an accumulator used to store or deliver a specific volume of liquid within a given pressure range. These curves are the graphic representation of an adiabatic cycle (fast cycling rate - $N = 1.4$ perfect gas assumption) or isothermal cycle for an accumulator working at 20°C with a Pre-charge $P_0 = 0,9 P_1$.

They do not take into consideration the real gas compression correction factor, the real adiabatic coefficient and the polytropic rate of the application. Depending on the application data, the influence of these factors may be significant, and require that some calculations adjustments be made. The Parker Olaer simulation software takes all these factors into account.

Sizing of an accumulator to be installed in the following example conditions:

- P2 : Maximum available pressure : 210 Bar
- P1 : Minimum working pressure : 100 Bar
- P0 : Nitrogen Pre-charge : 90 Bar
- ΔV : Volume to be stored : 14L
- Condition : Isothermal (No temperature variation)

A/Compression ratio $\infty = P_2/P_1 = 210/100 = 2,1$

B/From the value 2,1 on the ∞ axis, draw a vertical line that intersects the isothermal reference curve in A.

C/From the value 14 on the ΔV axis, draw a vertical line. The intersection point of this line with the horizontal line meeting A indicates a required accumulator size of 32 L.

Calculation of the volume drawn off from an accumulator.
 Accumulator size = 12 L
 P2 = 185 Bar; P1 = 100 Bar;
 P0 = 90 Bar; Adiabatic condition
 $\infty = P_2/P_1 = 185/100 = 1,85$
 ΔV : 3,5 litres

***Reminder**

Isothermal: The transformation is said to be isothermal when the compression or expansion of the gas occurs at a rate slow enough to allow a good thermal exchange, allowing the gas to remain at constant temperature.

Adiabatic: The transformation is said to be adiabatic when the cycle is quick and does not allow a temperature exchange with the ambient media.

Basic sizing chart for accumulator used in energy storage.

Top Repairable Accumulators

This accumulator type can be serviced from both the fluid side or the gas side. The design utilizes many standard accumulator parts, but is unique in that it does not have to be removed from the system in order to change the bladder. This can in many applications be a great advantage. The gas end adaptor mechanically locks to prevent disassembly under pressure.

High Flow Bladder Accumulators

Parker Olaer has several versions of bladder accumulators for high flow applications, depending on how high the flow requirements will be. The first step up from our standard is a high flow version with a 2" fluid port, where the internal geometrics of the port body and poppet valve are specifically designed for that purpose. The next step is a 2 1/2" fluid port which will provide even higher flows. For ultimate demands a 4" fluid port can also be provided. Please note that the last two solutions require shells with larger openings, and are not always available in all shell sizes. Parker Olaer can tailor-make the different parts to suit your technical needs.

Transfer Barrier Accumulators

This range is a special adaptation of the bladder accumulator, with a pipe connected to the gas side of the accumulator. The most common application is to use the transfer accumulator in energy storage applications. The accumulator is connected to an additional volume of nitrogen, for example a gas cylinder. This increases the total volume of the system. Such systems are often mounted together in a battery or rack type installation.

A Transfer Barrier Accumulator can also be used to separate two liquids or a gas and liquid. It is usually a question of separating two liquids, one of which is aggressive or contaminated. To limit the number of parts in contact with the aggressive liquid, it is common practice to put the aggressive fluid inside the bladder and therefore connect on what is normally the gas side.

Dependant upon the accumulator volume, the displaced volume must not exceed 80% of the volume of the transfer accumulator.

EBV Series Bladder Accumulators

EBV - ELG Series, up to 80 bar

Technical Characteristics

The accumulator comprises a forged or welded steel shell, a rubber bladder and anti-extrusion system.

- Shell material options include alloyed steel, stainless steel, aluminium, titanium and composites.
- Various bladder materials available which are compatible with a wide range of fluids and temperatures.
- Anti-extrusion system: perforated bushing.

In standard versions : steel shell, bladder and rings in nitrile for operation with mineral oils.

Operating temperature : - 40°C + 140°C

Special constructions : consult Parker Olaer

Volume: from 0.5 to 575 Litres

Pressure: from 14 to 80 Bar

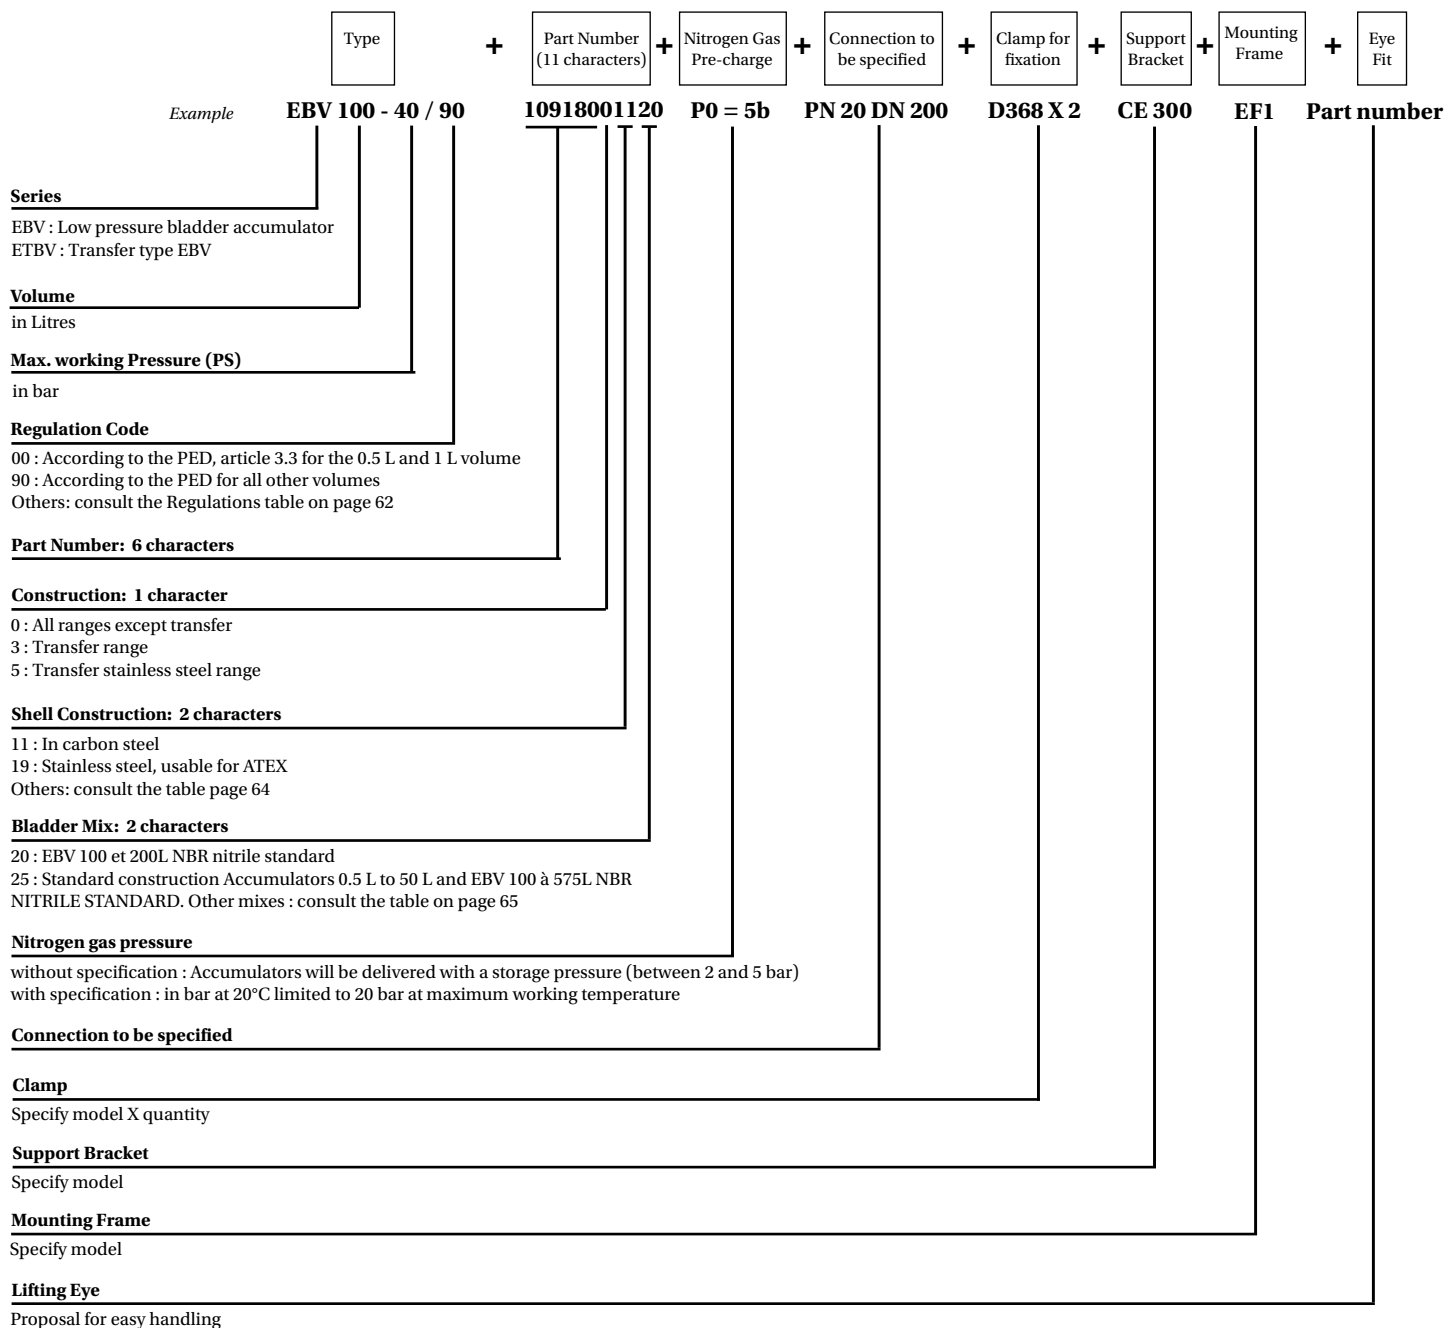

Nitrogen gas pressure : Never precharge accumulator at a pressure exceeding 20 bar at maximum working temperature

Item	Spare parts
1	Spare Parts Kit
2*	Bladder Assembly

EHV Series: General Information Bladder Accumulators

Technical Characteristics

The accumulator comprises a forged steel shell, a rubber bladder and a fluid port assembly.

- Shell material options include alloyed steel, stainless steel, aluminium, titanium and composites.
- Various bladder materials available which are compatible with a range of fluids and temperatures.
- Anti-extrusion system: fluid port assembly for high pressure.

In standard versions : shell in steel, bladder and rings in nitrile for functioning with mineral oils.

Operating temperature : - 20°C + 80°

Special constructions : following others volumes, fluids, temperatures, regulations. Consult Parker Olaer

Volume: from 0.2 to 57 Litres

Pressure: from 70 to 690 Bars

Nitrogen gas pressure : The maximum pressure (PS) is indicated on the accumulator. Check that the maximum allowable pressure is greater than that of the hydraulic system.

Item	Spare parts
1	Spare Parts Kit
2*	Bladder assembly
3*	Gas valve
4*	Valve cap
5	Fluid port assembly
6*	Anti extrusion ring
7*	Seal kit

* These parts are supplied as a kit with instructions.

Series EHV: High pressure bladder accumulator EHVF: EHV with Flange EHVDA: High Flow EHV ETHV: Transfer type EHV															
Volume in Litres															
Max. working Pressure (PS) in bar															
Regulation Code 00 : According to the PED article 3.3 for the volumes from 0.2 to 1L , Fluid Group 2 90 : According to the PED Others: consult the table pages 62 & 63															
Part Number: 6 characters															
Construction: 1 character 0 : All ranges except transfer 3 : Transfer range 5 : Transfer stainless steel range															
Shell Construction: 2 characters 11 : In carbon steel 19 : Stainless steel, usable for ATEX Others: consult the table page 64															
Bladder Mix: 2 characters 20 : Accumulators 0.2L NBR NITRILE STANDARD 25 : Standard construction NBR NITRILE STANDARD Other mixes: Consult the table page 65															
Nitrogen gas Pressure Without specification: Accumulators will be delivered with a storage pressure between 2 and 5 bar. With specification: in specified bar at 20 °C															
Connection to be specified															
Clamp Specify model X quantity															
Support Bracket Specify model															
Mounting Frame Specify model															
Lifting Eye Proposal for easy handling															

EHV Series 330 bar, 10 to 57 Litres

Standard version (**Carbon Steel** shell/NBR mix) for mineral oils
 According to PED 97/23/EC, EN 14359 Fluid Group 2

Due to our vast experience in demanding markets such as aerospace, military, nuclear, renewable energies and formula one racing, we are offering an unmatched range of rubber compounds to meet the most difficult applications.

Parker Olaer products are supported all over the globe, and we will meet customer requirements wherever needed. We therefore offer the complete range of approvals, such as all key Marine approvals (BV, DNV, ABS, LR, ...), over and above all country specific approvals (PED, ASME, SELO, CRN, ARH, CUTR, ...).

Depending on your application, fluid and the environment in which you install your systems/equipment, Parker can offer a variety of internal and external shell coatings for your bladder accumulator. Please contact our technical support or your local accumulator expert if you are uncertain what you may require or for more details on the various coatings.

For the EBV range concerning 100 to 575 L pages 14 to 18, 22 and 23: please consult your local contact.

This list is not exhaustive. Parker can propose other mixes suitable for your application. Consult your local contact for more information

O&G Series Bladder Accumulators

High Pressure, 207 to 760 bar

IN THIS SECTION

O&G series General Information	68
O&G series 207 to 420 bar	69
O&G series 480 & 517 bar	72
O&G series 690 to 760 bar	75

This range has been specially developed for the Oil & Gas industry however it is also ideally suited for other highly demanding markets.

Applications utilising Parker ACDE products include wellhead control systems, pressure compensation, temperature compensation, emergency shutdown actuation and blow-out prevention.

O&G Series: General Information

Technical Characteristics

The accumulator comprises of:

Shell

Forged seamless chrome molybdenum steel, designed and manufactured to PED 97/23/EEC and CE marked.

Label

With assembly specification and installation details.

Material Certification

Available on request for all major pressure loaded parts to EN 10204 3.1

Finish

One coat primer paint as standard. Special paints available.

Bladder

Totally enclosed construction with an extensive range of elastomers available.

Fluid Port Assembly

Integral high-flow port and poppet valve assembly with an anti-extrusion ring.

Safety

All gas-loaded accumulators are pressurised vessels and it is recommended that safety consideration be given to the application in which they are used. A relief valve should always be fitted to the hydraulic system with the option of a burst disc to protect the accumulator. See Installation and Servicing data sheet for information regarding installation of accumulators.

Pressure Testing

A hydro static pressure test is carried out on all our accumulator shells during the manufacturing process. We can carry out additional pressure testing witnessed by a specified Inspection Authority and/or customer as an optional extra if required.

We can also carry out a hydro-pneumatic pressure test on the complete assembly as an optional extra if required. Again this can be witnessed by a specified inspection authority and/or customer.

Accessories

A complete range of accumulator accessories are available from Parker.

Spare Parts

Available on request.

Operating Temperature

Shell operating temperature range is from -40°C to +80°C as standard.

Bladder Details

Parker offer a wide range of bladder materials to suit most applications.

Table 1 - Material according to temperature range.

Range of bladder materials available with their corresponding working temperature range when handling non-aggressive fluids.

Material Code	Bladder Material	Temperature Range (Deg. C)			
		Static		Dynamic	
0	Nitrile	-20	100	-15	100
1	Butyl	-15	120	-15	120
2	Low Temp Nitrile	-40	70	-25	70
3	Low Permeability Nitrile	0	105		
6	Fluorocarbon (Viton)	-20	130		
7	High Aromatic Nitrile	0	105		
8	High Temp Nitrile	0	150		
9	EPI - Chlorohydin 100	-20	120		
A	Ethylene Propylene (EP)	-20	120		
B	EPI - Chlorohydin 200	-40	120		
K	Special Low Temp Nitrile	-79	100	-59	100
L	Peroxide Cured EPDM	please contact us for details			
M	High Temperature Fluorocarbon	-10	200		
N	Low Temp Nitrile	-45	70

General Information EHP Piston Accumulators

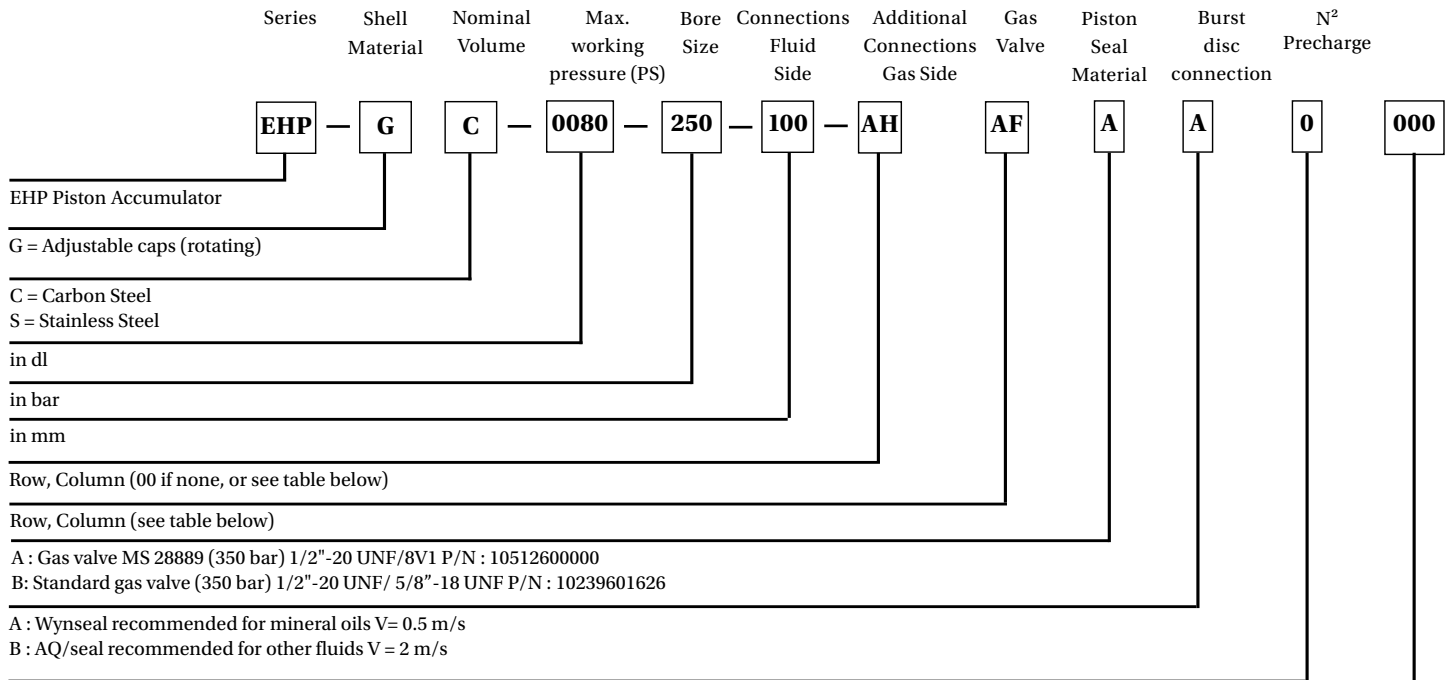

Technical Characteristics

The accumulator comprises of a pressure vessel, a piston and its seals.

- Shell material options include standard carbon steel and stainless steel.
- End caps - steel, pistons lightweight aluminium alloy. Piston and end cap seals in NBR (standard version), other compounds to suit application.
- For unique applications and hostile environments, different designs, materials and coatings can be supplied. Please contact our division
- A wide variety of options is available following of the series, for example
 - Threaded and manifold port styles and sizes
 - Seal compounds
 - High flow gas ports
 - Gas valves, safety fuses....

EHP Series: How to order a Piston Accumulator

Above dimensions are in mm and are subject to manufacturing tolerances.

EHP Series 250 bar, 4 to 20 Litres, Ø 140

Standard version (Carbon steel/Wynseal for mineral oil, AQseal for other fluids) for mineral oils,

According to PED 97/23/EC, EN14359-2006

up to 3000 bar: EHP Pistons

Carbon and Stainless Steel

Benefits

- **Experienced Technical Support Team** to help develop the most effective and efficient product for your system/application.
- **Materials to suit the most demanding environments.** Parker Olaer offer a choice of materials from metallic and elastomeric components to suit the operating environment e.g. chemical compatibility, environment conditions (topside or subsea) and temperature extremes.
- **International design codes and regulations.**
- **Meeting the highest pressure requirements.** This high pressure piston range can provide pressures of up to 2500 bar (more than 36,000 psi).
- **Bespoke Designs to suit your needs.** Parker Olaer pistons can be designed and built to your specified criteria and can therefore meet any space limitations you may have.

High Pressure, up to 3000 bar: General Information

Technical Characteristics:

Capabilities

Parker ACDE Piston Accumulators are available in any capacity up to 1350 litres. Capacity is only limited by pressure and available materials. Our standard range is 1 litre up-to and including 150 litres. All units are made to order, and can be custom engineered to suit specific space restrictions.

Pressure

Piston Accumulators are available in any pressure between 5 bar and 3000 bar. The pressure rating is dependant on capacity and/or available materials.

Materials

Our units are available in a variety of materials such as Carbon steel, Stainless steel, Duplex or Super Duplex steels and Aluminium. All come with a choice of material certification options.

Design

Vessels will be in accordance with the PED 97/23/EC for use in Europe and designed to PD5500. Optional 3rd party witness (eg. Lloyds) available. Other design codes can be considered for example ASME VIII Div 1.

Fluid End Connections

To suit customer requirements – e.g. NPT, BSP, Autoclave type or SAE/ASME flanged.

Gas End Connections

To suit customer requirements – e.g. NPT, BSP, Autoclave type or SAE/ASME flanged. Transfer barrier ports, Gas Charging valves (brass and stainless) Gas pressure relief devices e.g. Burst discs and Fuse plugs.

Seals

For low or high temperature applications. Materials typically Nitrile, PTFE, Viton, EPDM and others.

Piston Position Indicators

Carbon Steel Options:

- Tailrod – magnetic operation with visual flapper or magnetic indicator switch.
- Bent tube Indicator - magnetic operation with visual flapper or magnetic indicator switch.
- Tailrod – operating a cam/switch.
- Proximity switch

Stainless Steel Options:

- Piston Magnet - magnetic operation with visual flapper or magnetic indicator switch
- Proximity switches

Carbon Steel Units

Wide range of product sizes we are available. For further information please contact a member of our sales team.

Raising the bar on piston design

Fully flexible design capacity allowing us to design products to suit your applications.

This is a small selection of the pistons we commonly supply however please contact us for other options and prices.

In-house Facilities

Design, Development and Production Services

Design Facilities

A dedicated technical team uses the latest 3D SolidWorks and Autodesk Inventor software driven by calculation programs (linked to EN14359, PD5500 and ASME VIII) to reduce design times and provide technical customer support.

Assembly

Our purpose built production area incorporates;

- Ultrasonic cleaning of components; tube washing bath with capability of up to 4 metres long x 750mm diameter.
- 40 metre x 5 tonne crane facility throughout the stocking, assembly and testing areas and 15 tonne crane in the Fabrication area.

Hydraulic Testing

The piston testing facility provides:

- Data logging of test results for permanent record
- Remote inspection for leaks by CCTV
- Steel self contained high safety cell
- Lift-off roof for large cylinders
- 2 off air-driven test rigs (water/ glycol & mineral oil) high volume, low pressure pre-test filling capable of testing up to 3000 bar

AP Series: How to order

Gas Port

Specification (where no valve supplied)

¹ Other approvals are available to order – please consult the factory.

² Where a gas port is specified, no gas valve will be supplied.

³ For other pressure ratings, please consult the factory.

Hydraulic and Gas Port Modifications

For accumulators with non-standard ports, specify special gas and/or hydraulic ports and use the appropriate port code from page 8. A typical model number for an accumulator with ISO 6149 hydraulic and gas ports would be: A - 3 - T - M - 0090 - D - 2 - K - YE/YE

Code	Pre-Charge (for example)
010	10 bar
020	20 bar

Hydraulic and Gas Ports

The BSPP ports shown are supplied as standard at the fluid ends of AP Series 250 bar accumulators, and at the gas ends of these accumulators when ordered for use with gas bottles. A range of optional threaded and flanged ports is also available, as shown below. All ports are specified by adding the relevant code to the accumulator model number.

Volumes are nominal

AP type includes Heavy duty Gas Valve

250 and 350 Bar Pressure Ranges

AP Series industrial accumulators are available in two different pressure ratings, to suit maximum working pressures of 250 and 350 bar. The same premium quality design and technical features guarantee optimum performance and service life from every AP Series accumulator model, while differing wall thicknesses allow the designer to specify precisely the right performance envelope for the application.

Available Options

A wide variety of options are available for AP Series accumulators, including:

- Port styles and sizes
- Seal compounds
- High flow gas ports for use with remote gas storage bottles
- Water service versions
- Safety fuses
- Mounting systems
- Precharge/piston position sensors
- Certifications to suit different market requirements

Water Service

AP Series piston accumulators are available for use with water as the fluid medium. Modifications include plating of all working surfaces. Please consult the factory for details.

Operating Temperatures, Seals and Fluids

Standard and optional seal combinations for AP Series accumulators are shown below. Other seals are also available for use in exceptional conditions – please consult the factory with details of the application.

The shells of Parker’s AP Series accumulators are CE approved for operation at temperatures between -25°C and +150°C.

Seals, Fluids and Temperature Ranges

Code	Seal Type	"Min Temp"	"Max Temp"	"Fluid Type"
K	"NBR (Nitrile)"	-30°C	75°C	General purpose, petroleum-based fluids
E	"FPM (Fluorocarbon elastomer)"	-25°C	150°C	High temperature and/or synthetic fluids
D	"EPDM (Ethylene Propylene)"	-25°C	120°C	Phosphate-esters
H	"HNBR (Hydrogenated Nitrile)"	-30°C	130°C	Most oil-based and biodegradable fluids
J	"NBR "Nitrile and filled PTFE"	-30°C	75°C	Water glycol, high water content fluids
Q	"LT-NBR (Low Temperature Nitrile)"	-45°C	71°C	General purpose fluids at low temperatures

Filtration

For maximum component life, the system should be protected from contamination by effective filtration. Fluid cleanliness should be in accordance with ISO 4406. The quality of filters should be in accordance with the appropriate ISO standards.

The rating of the filter media depends on the system components and the application. The minimum required for hydraulic systems should be class 19/15 to ISO 4406, which equates to 25µ (β10≥75) to ISO 4572.

Safety

Charging must be carried out by qualified personnel. Before taking any readings or pressurizing with nitrogen, the accumulator must be isolated from the hydraulic system and the fluid side discharged in order to depressurize it. Use only nitrogen (N₂) to pressurize the accumulator.

Danger of Explosion – Never Charge with Oxygen

The types of nitrogen permitted are: type S (99.8% pure); type R (99.99% pure); type U (99.993% pure).

Approvals

Approvals	AP180	AP250	AP360
PED 97/23/EC	•	•	•

Mounting

The optimum mounting orientation is vertical however angled and horizontal mountings are permissible if the hydraulic fluid is kept clean; high levels of contaminants in the fluid can result in uneven or accelerated seal wear.

¹ Where the optional poppet-type gas valve is fitted (see page 104), dimension C should be increased by 13mm.

² A Series piston accumulators are supplied as standard with the metric threaded mounting holes shown in the table. They are also available with inch pattern mounting holes, indicated by the Design Number in the model code – see page 100.

Volumes are nominal
 AP type includes Heavy duty Gas Valve

Gas Valves

The standard gas charging valve fitted to A Series 250 and 350 bar piston accumulators is a cored-type gas valve, rated at 350 bar. A mechanically opened and closed poppet-type gas valve cartridge, also rated at 350 bar, is available as an option.

Standard Cored-Type Gas Valve

Optional Poppet-Type Gas Valve

Piston Accumulator Seal Kits

Seal kits are available for all A Series accumulator models however it is recommended to buy a piston assembly with seal already assembled.

When ordering seal kits, please supply the complete model number from the identification plate and specify the fluid type and the temperature at which the accumulator is to be used.

Seal Kit Numbers

The seal kits listed contain items 4 (including 5,6 & 7) and 11.

Parts List

- 1. Shell
- 2. Hydraulic cap
- 3. Gas cap
- 4. Piston
- 5. V-O-ring
- 6. V-O-ring back-up washers
- 7. PTFE bearing ring (piston)
- 8. O-ring
- 9. O-ring back-up washer
- 10. Gas valve
- 11. Gas valve O-ring
- 12. Gas valve protector
- 13. Gas valve protector screw

Safety Fuses (Burst Discs)

Safety fuses are available on A Series accumulators to prevent over-pressurization of gas due to external heat or excess hydraulic pressure. They comprise a housing incorporating a disc which is calibrated to rupture at a pre-determined pressure, to be specific by the customer at the time of ordering. Please contact the factory for further information.

Available Options

If your application requires a piston accumulator, gas bottle, or special option that falls outside of Parker's broad offering, consult your local distributor, Parker representative, or the factory with your specific requirements. Parker has the manufacturing and engineering expertise to design and build piston accumulators to your exacting requirements, from simple modifications of standard units to complete designs. Some example of Parker's past special designs include:

- High Pressures
- Special and Stainless Steel Materials
- Piston Position and Velocity Sensors and Switches
- Water Service
- Non-Standard Capacities
- Extreme Temperatures

Pulsation Dampers

Stainless Steel, up to 690 bar

Pulsation Dampers: Benefits

1 Shell

CE certified in accordance with the PED (97/23/EC) where applicable. Manufactured from high grade 316 Stainless Steel, other materials available.

- Nominal capacities 0.1 litre to 5 litres.
- Working pressures of up to 690 bar, higher pressures available on request.
- Wide range of separator materials available
- Designed to PD5500 or ASME VIII Div 1.
- U Stamp is available as an option.

2 Label

Vessel information is stamped directly on shell. Stainless Steel nameplates are available at an extra cost.

3 Material Certification

Material certifications are available to EN10204 3.1
NACE MR0175 compliance is available on request.

4 Finish

Natural finish, unpainted as standard. Special paints available.

5 Fluid Port

A large variation of threaded or flanged options are available. For connection options please see page 134.

6 Safety

All gas-loaded pulsation dampers are pressurised vessels and it is recommended that safety consideration be given to the application in which they are used. A relief valve should always be fitted to the hydraulic system with the option of a burst disc to protect the pulsation damper. See Installation and Servicing data sheet for information regarding installation of pulsation damper.

7 Pressure Testing

A hydrostatic pressure test is carried out on all our pulsation dampers shells during the manufacturing process. We can carry out additional pressure testing witnessed by a specified Inspection Authority and/or customer as an optional extra if required.

We can also carry out a hydro-pneumatic pressure test on the complete assembly as an optional extra if required. Again this can be witnessed by a specified inspection authority and/or customer.

8 Accessories

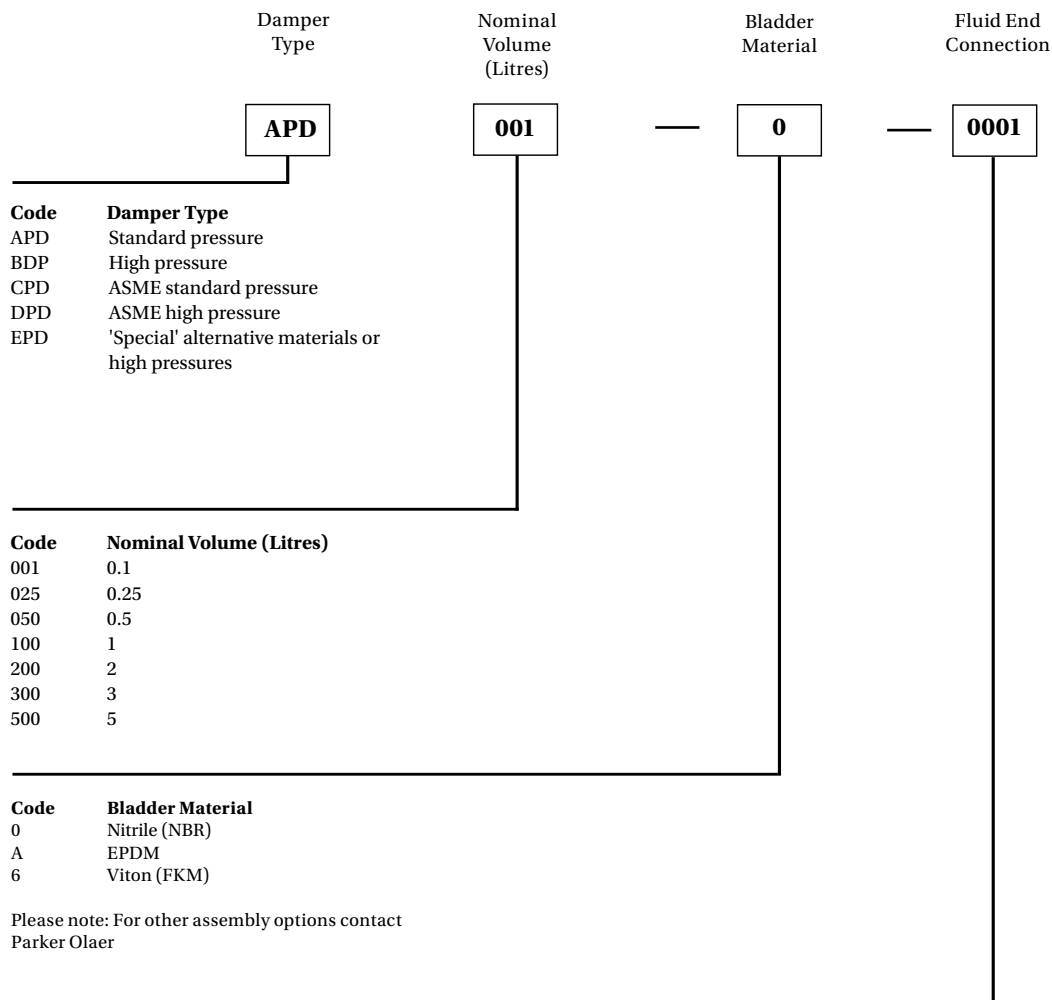

A complete range of damper charging equipment is available from Parker Olaer.

9 Spare Parts

Available on request.

Note: In most cases the fitting of a flange will de-rate the design pressure of the damper if in any doubt please refer to flange specification ANSI B16.5 for the maximum working pressures.

These dimensions and weights are to be added to the damper dimensions if a flange is required.

Note: Dimensions are based on current stock and are subject to change without prior notice.

Attenuators

350 bar

IN THIS SECTION

ATTENUATORS

SH Series: 350 bar	136
General Information SH Series Attenuators	138
SH Series: How to order	138

Reducing noise in hydraulic systems

To attenuate the pressure pulses by at least 20 dB over a wide frequency range, Parker Olaer produces high-frequency hydraulic attenuators with models ranging from 100 to 1000 Hz, in addition to its range of accumulators (up to 300 Hz).

General information Attenuators

The performance obtained with the attenuators substantially reduces the fluctuations of high-frequency hydraulic pressure (see diagrams 1 and 2).

attenuation levels of the pressure pulses as a function of the frequencies to be filtered, and secondly an example of the amplitude spectra of a pump with and without a muffler, which reduces the pulses from 217 dB to 190 dB.

Curves 3 and 4 show firstly a typical attenuation curve (in dB) specific to each model of muffler, indicating the

ELM Series Technical Characteristics

The technical characteristics are as follows:

Minimum/maximum temperature allowable (° Celsius) :

- 20/+80 for standard nitrile elastomers for models between 0.5 < V < 1.4 Litre
- 10/+80 for standard nitrile elastomers for models ≥ 2 Litres and < 0.32 Litre
- 35/+80 for hydrin elastomers

Materials : carbon steel or stainless steel, nitrile or hydrin diaphragm, for other constructions: please consult Parker.

This non-repairable accumulator comprises a shell electron beam welded in carbon steel or stainless steel, nitrile or hydrin diaphragm, for other constructions please consult Parker Olaer.

Your Benefits

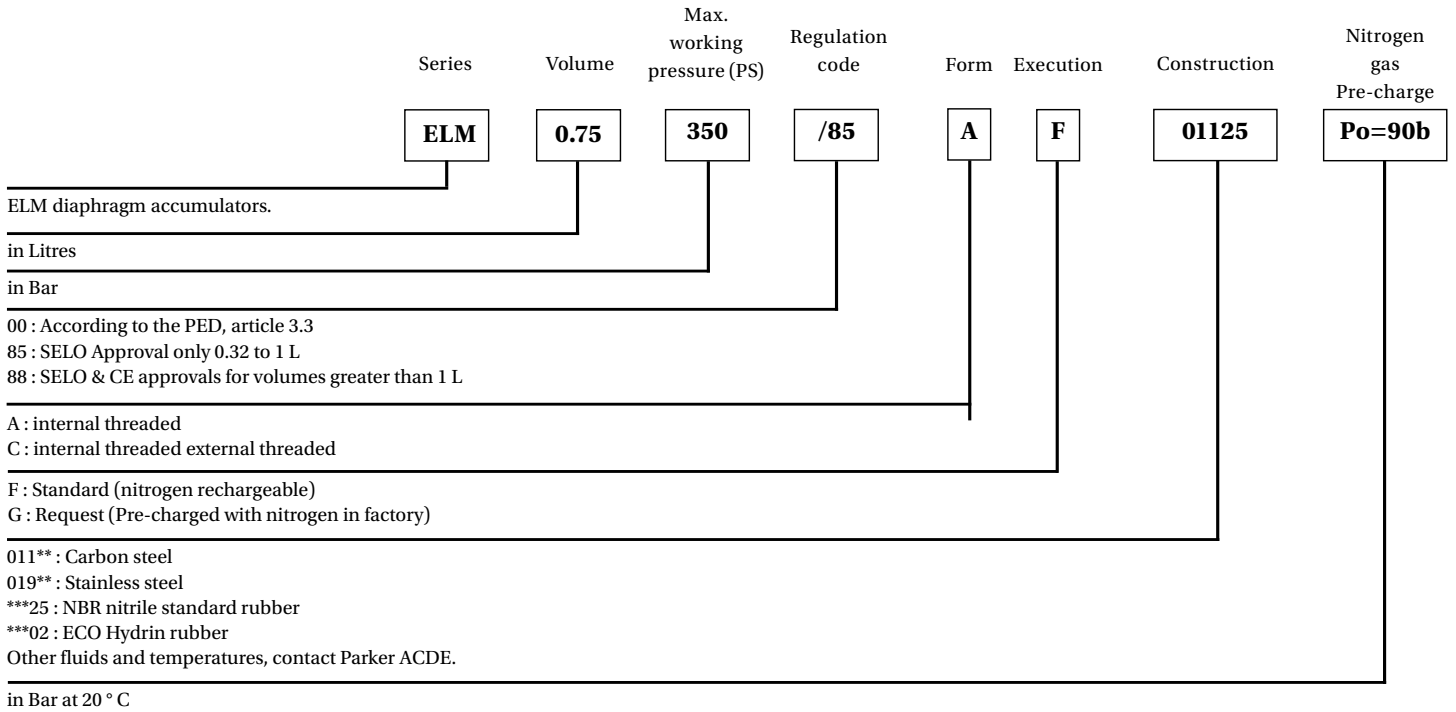

- The adaptation of a hydraulic shock absorber made up of a diaphragm accumulator improves driver comfort and offers immediate response times when driving over obstacles and the same flexibility for variable operating conditions.
- The same EC pressure directive (PED) compliant accumulator can be used in over 35 destination countries, thus facilitating their free movement. In addition all our ELM diaphragm accumulators have SELO approval for China.

Comparative cycle for a tractor and its accessories in working conditions !

Charging Set VGU

The charging set VGU is an indispensable instrument for the verification, pressurization and nitrogen bleeding of most of the hydraulic accumulators available on the market. The standard set is delivered in a storage case containing the following:

- VGU universal tester and pressurizer (end M28 x 1.50).
- Pressure gauge kit from 0 to 25 bar.
- Pressure gauge kit from 0 to 250 bar.
- Connection adapters for inflation valves (7/8" - 5/8" - 8V1 - M28 x 1.50 G 1/4").
- High pressure hose, 2.5 m long, for connecting to a nitrogen source.
- Hexagon socket screw key 6mm.
- Spare parts kit including rings
- Operating instruction in French, English, German.

Note: On request, the following options are available:

- Pressure gauge kits with different scale divisions: 63mm with glycerol bath back end G1/4" cyl. equipped with direct gear for Minimess® connection. Scale divisions 0-10, 0-60, 0-100, 0-400, with accuracy class 1.6%.
- High pressure hose of different length with adapters for nitrogen bottles from various countries (specify country), at each end with a female swivel coupling G1/4" for connecting to the inflation port.

Maximum working pressure: limited by the maximum operating pressure of the installed hydraulic system, pressure limited to **400 bar** in any case.

How to order a VGU Charging Set

Safety Blocks

Parker Olaer has developed a complete range of decompressing and isolating blocks (sizes 10 to 50) to answer all standard and special applications.

These blocks are in conformity with the European Directive on the equipment under pressure (97/23), these appliances have been designed to group together in a single compact unit all the components necessary for the correct operation of a hydraulic system equipped with hydropneumatic accumulators.

The basic block consists of :

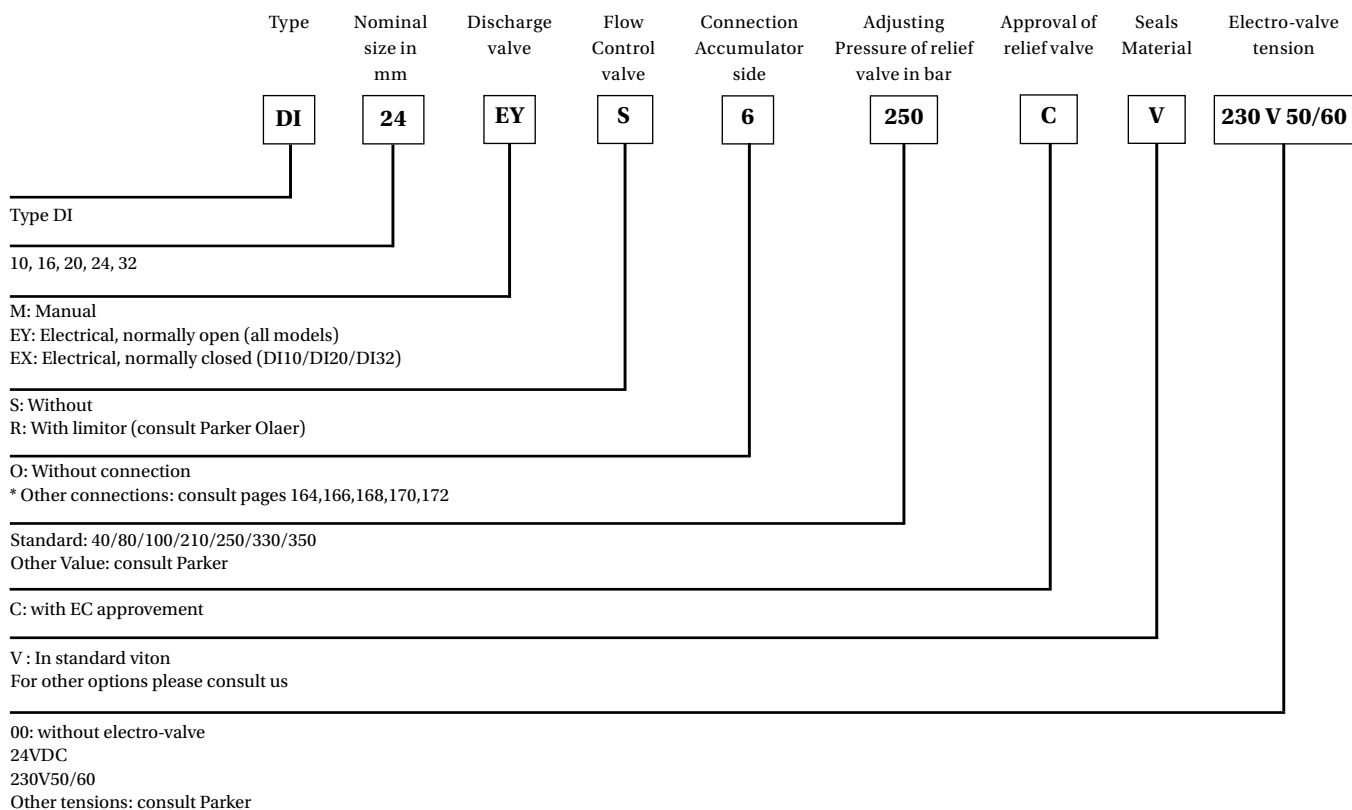

- Isolating valve to isolate the accumulator from the circuit for all the blocks except from model DI 10 where it also ensures the decompression function.
- A drain valve for decompressing the accumulator for all models (except DI 10)
- A pressure relief valve EC with poppet calibrated generally to the maximum service pressure of the accumulator (under no circumstances must this appliance be used to protect the hydraulic pump)
- Pressure tapping port (M)

In the E version, the basic block, to decompress the accumulator, can be equipped with an electro-valve :

- 2 ways 2 positions (DI 10/DI 20/DI 32) cartridge type.
- 3 ways 2 positions (DI 16/DI 24) with impact of connection according to DIN 24340 Form A, ISO 4401 and CETOP RP 121 H.

Safety Block DI 10

TECHNICAL DATA DI 10

- **Size:** Nominal diameter : 10 mm
- **Maxi working pressure:** Manual version : 400 bar
Electrical version : 350 bar
- **Weight without connector:** Manual version : 3,5 kg
Electrical version : 4 kg
- **Materials:** Carbon steel
According with the fluids of group 2 (PED)
- **Temperature:** Manual version : - 10°C à + 70°C
Electrical version : - 10°C à + 60°C (ambient temperature)
- **Electrical data:** DC : 24 V
AC : 230 V-50/60 Hz
Standard protection : IP 65
Standard connector : DIN 43650
- **Connection accumulator side:** See page 162
- **Pressure / return connector of circuit:** See hydraulic drawing
- **Pressure relief valve EC (nominal dia):** 10 mm
- **Flow:** Consult the diagram

Above dimensions are in mm and are subject to manufacturing tolerances.

Safety Block DI 10 Manual Version

Standard version (Carbon steel, rings VITON) temperature -10°C up to 70°C Maximum working pressure : 400 Bar

According to PED 97/23/CE, EN 14359 Fluid Group 2

SBA Series Safety Block

TECHNICAL DATA SBA SAFETY BLOCK

- Construction**

- shut-off valve: ball valve
- pressure relief: poppet-type valve with damping
- manually-operated discharge valve: poppet-type valve
- electrically-operated discharge valve: poppet-type valve (where fitted)

- Port type**

see table below

- Mounting position**

Accumulator port A facing upwards

- Mounting screws (not supplied)**

M8 to grade 10.9, max. torque 26 + 4Nm

- Ambient temperature**

-30°C to +80°C

- Max. operating pressure**

350 bar

- Relief flow rate G at pnom**

see table below

- Fluid**

Mineral oil according to DIN/ISO. For other fluid types, please contact the Parker.

- Operating temperature**

-15°C to +80°C

- Viscosity**

10 to 800 mm²/s

- Δp-Q-graphs**

see right side of this page

- Electrical discharge**

U=24VDC, 105VDC (for 115V/60 Hz AC supply), P=26W, 100% ED,

IP 65 to DIN 40050, connector to DIN 43650 type A

- Finish**

Black zinc phosphated

- Seal material**

Nitrile

Flow - Accumulator (A) to Pressure Port (P)

² xxx = pressure setting of pressure relief valve - Consult Division

SBA Type M
Manually-Operated Discharge Valve

SBA Type E
Manually- and Electrically-Operated Discharge Valves

Accessories

Pressure Relief Valve

The function of the pressure relief valve is to protect the accumulator in service. If pressure exceeds the relief valve setting, the valve lifts off its seat and fluid is discharged to tank, allowing pressure in the system to fall to a safe level.

Because of its cartridge design, the pressure relief valve can be readily replaced by a valve with a different pressure setting, selected from the table. A new approval under PED 97/23/EC is not required following this change. The pre-set relief pressure, in bar, is stamped onto the identification plate.

Pressure P (bar)	Item Number
50	SV050
70	SV070
100	SV100
120	SV120
140	SV140
160	SV160
200	SV200
210	SV210
250	SV250
280	SV280
300	SV300
330	SV330

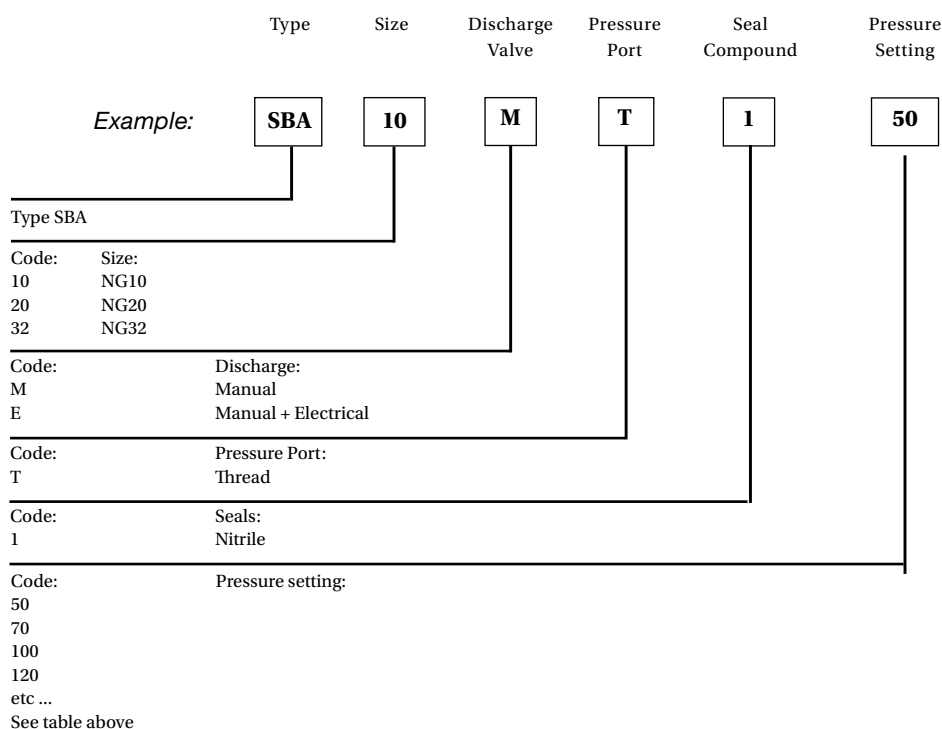

Type Approval

The pressure relief valve is checked and security sealed following approval, according to pressure vessel regulations. It carries a CE mark, type approval number and serial number. All valves are supplied with a certificate showing the pressure setting. The documents supplied with the pressure relief valve must be retained, as they will be required in the event of repeat tests.

ECA & ECSA Series Safety Block

TECHNICAL DATA CARBON STEEL SAFETY BLOCK (345 BAR)

Maximum working pressure: 345 bar

Materials: Carbon steel. All blocks are fully tested.

Seals: Nitrile fitted as standard. Viton and other options also available.

Connections :

- Pressure gauge connection (M port).
- Wide range of adaptors for accumulator connection.
- All G threads (BSP) to BS2779 1986. Performance data available.

Other:

- Pressure relief valve for the protection of accumulator.
- Manual dump to tank valve as standard.
- Optional additional electromagnetic dump to tank valve.

TECHNICAL DATA STAINLESS STEEL SAFETY BLOCK (345 BAR & 690 BAR)

Materials: 316 Stainless steel. All blocks are fully tested.

Seals: Nitrile fitted as standard. Viton and other options also available.

Connections :

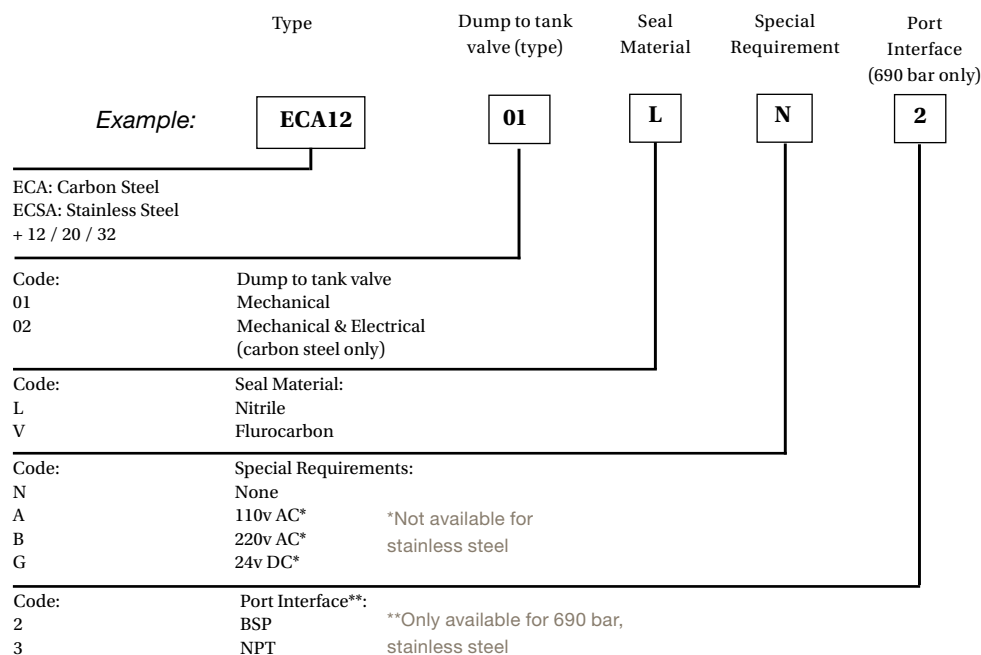

- Pressure gauge connection (M port).
- Wide range of adaptors for accumulator connection.
- All G threads (BSP) to BS2779 1986.
- For 760 bar only - All NPT to ANSI/ASME B.1.20.1 1983
- Performance data available.

Other:

- Pressure relief valve for the protection of accumulator.
- Manual dump to tank valve as standard.

Burst Disc Kit

TECHNICAL DATA CARBON STEEL SAFETY BLOCK (345 BAR)

Parker burst discs are available for the EHV range of accumulators, designed adaptor, available in carbon steel or stainless steel.

Burst discs are a safety device which release the gas pressure independent of the pressure being caused by a fire or a failure of other safety equipment in the system.

This is a secondary safety device and it should be set higher than the normal hydraulic safety devices in the system.

This material is delivered with the kit including burst disc, o-ring, and label.
